

## GPX Routes – September 18, 2021

<https://www.reddit.com/r/PoGoAndroidSpoofing>

Pokemon Go Android Spoofing subreddit for all current No Root, Rooted, and Bot methods along with other guides for Android devices only.

### What is new this time?

- This zip contains 1,333 GPX files.
- New routes including **big city routes** have been added
  - New Zealand: Christchurch, Timaru, Wellington, & Auckland
  - Santa Monica Pier
  - Antarctica
  - Refreshed Kiribati, London – Small Area
  - Zaragoza, Spain divided into smaller 600-700 stops GPXs
- New Hotspot & Events by GMT folder
- New text file for coordinates only

### Filename:

**Country, City – Park or Area Name (# of Markers).gpx**

- **Country** is first to keep them all grouped together. If I do **City** first, it will be put in alphabetical order from A to Z. They will not be in an easy to find order.
- Some **Park** do not have an English name, so I have to use the **Area Name**. I used Google Maps to name the routes.
- **(# of Markers)** is the number of markers or points on the map and does not always equal the real number of Poke stops in the area. This is to help you see how short/small or long/big a route is.

### Works with Android Apps:

- **PGSharp** (no root) but requires a paid key for the GPX feature
- **GPS Joystick** (rooted)
- **Fake GPS Joystick & Routes Go** (rooted)
- **Enhancer** (rooted) but requires a subscription to use.

### Credits:

I, TastyBananaPeppers, at r/PoGoAndroidSpoofing reddit have collected them for you. Since PGSharp has a feature to create GPX with pokestops on the map, I used it to create Big City GPX Routes for popular areas that didn't have a GPX before. You're welcome!
